RACOR ASSEMBLIES

The legendary Racor Turbine Series is used extensively in the Marine and Power Generation, as well as Construction, and Agricultural Industries. Its effectiveness is based on 3 processes:

Separation: The turbine separates large solids & free water through centrifugal action.

Coalescing: Small water drops & solids coalesce on the baffle surfaces, & collect in the bowl.

Filtration: Racor's proprietary "Aquabloc" filter media provides near 100% water separation and fuel filtration (available in 2, 10, & 30 micron nominal ratings)
